- ✿ Greatly reduces scarring
- ✿ Evens out pigmentation
- ✿ Effective treatment for acne
- ✿ Restores moisture to the skin
- ✿ Repairs sun damaged skin
- ✿ Effective treatment for Psoriasis and Eczema

Laura B. - 49 years old

*"Red light has totally changed my skin, I can feel, my face and neck tightening. I am 49 years old and that is a big accomplishment. My age spots on my hand have totally disappeared. But the most surprising is the extreme dryness on my legs has disappeared. I have experienced this for years with no relief."*

Michael M.

*"I have suffered with back pain from osteoarthritis in my spine for years. I could only walk a few steps and had to rest, it was really affecting my quality of life. Then my wife heard about Red Light Therapy and I decided to try it for two months. I feel so much better, I am able to sleep through the night, I have so much more range of motion and even take walks and bike rides with my wife. I am telling everyone I know how RLT has given me my life back!"*

## Why Red Light Therapy?

Red Light Therapy is a safe all natural process that encourages your body to naturally produce enzymes, elastin fibers, and collagen that support the skin's structure. Thus producing a younger smoother firmer feeling skin. Infrared Light Technology has been extensively researched and used by NASA, Mayo Clinic, National Institutes of Health, US Military, and many more worldwide, It has been found to be effective at repairing damaged skin, treating depression, relieving pain, treating wounds and much more.

## Initial Results (First 4 Weeks)

Initially you'll notice fine lines start to diminish, your skin will have a much smoother feeling to it, pigmentation will start to even out, and any blemishes or acne will start diminishing.

## Long Term Results (4-12 Weeks)

Over time Improved oxygenation and detoxification of the skin is achieved as the vascular walls of the skin's small blood vessels are strengthened, followed by improved natural repair and creation of healthy skin. This will help restore and firm up tired looking skin, decrease fine lines, wrinkles, stretch marks, diminish freckles, age spots, eliminate acne, even out pigmentation, minimize the size of facial pores, improve the appearance of sun-weathered skin, and stimulate collagen synthesis. Overall improving the skin's underlying supportive structure and making you look and feel years younger!
